

ABSTRACT OF THE DISCLOSURE

The current invention provides a method and system for establishing communication to a mobile module. A plurality of call signals is initiated into the mobile module from a plurality of remote communication devices based on a
5 timed sequence. Which of the plurality of call signals has established communication with the mobile module is determined. The call signals that have not established communication are terminated based on the determination. A computer usable medium with suitable computer program code is employed for
10 establishing communication to a mobile module.
